**DETAILED ACTION**

**EXAMINER'S AMENDMENT**

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

A. In Claim 1,

a. Line 4, change "establishing the position and orientation" to -- establishing position and orientation --.

b. Lines 13-14, change "to account for the instability" to -- to account for instability --.

B. In Claim 13,

a. Line 2, change "wherein said step of track-following includes" to -- wherein the track-following procedure includes --.

b. Line 4, change "in the radial direction" to -- in a radial direction --.

C. In Claim 14,

a. After the last line (Line 12), add -- said processor means compares measurements of adjacent sets of tracks of said hard disk to calibrate said data signals and adjust said data signals for skew angle deviation. --

D. Delete Claim 20.

Art Unit: 2862

Authorization for this examiner's amendment was given in a telephone interview with Morton Rosenberg on September 23, 2005 and September 26, 2005.

***Allowable Subject Matter***

2. The following is an examiner's statement of reasons for allowance:

As to Claims 1-13,

The primary reason for the allowance of claim 1 is the inclusion of (e) establishing numerical alignment of the data to account for instability of the triggering signal and the spindle of the spin-stand and (f) returning to step (e) prior to completion of reading the data from the hard disk. It is these features found in the claim, as they are claimed in the combination that has not been found, taught or suggested by the prior art of record, which makes this claim allowable over the prior art.

Claims 2-13 are allowed due to their dependency on claim 1.

As to Claims 14-19, 21, and 22,

The primary reason for the allowance of claim 14 is the inclusion of the processor means compares measurements of adjacent sets of tracks of the hard disk to calibrate the data signals and adjust the data signals for skew angle deviation. It is these features found in the claim, as they are claimed in the combination that has not been found, taught or suggested by the prior art of record, which makes this claim allowable over the prior art.

Claims 15-19, 21, and 22 are allowed due to their dependency on claim 14.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Conclusion***

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

1) U.S. Pat. No. 6,400,519 to Mukoyama which discloses a head testing device, a magnetic disk, a magnetic head, an amplifier, an oscilloscope, and a PC.

2) U.S. Pat Pub. No. 2003/0053235 to Kikugawa et al. which discloses a spin-stand, a magnetic head, double-layer perpendicular magnetic recording media, a spindle motor, a digital storage oscilloscope, a head amplifier, and a computer.

3) U.S. Pat. No. 6,061,201 to Woods which discloses a method of measuring the read-to-write offset of a track in a disc drive system including a spindle, a spindle motor, a disc, and a transducer.

None of the above references includes, in any combination, the feature of e) establishing numerical alignment of the data to account for instability of the triggering signal and the spindle of the spin-stand and (f) returning to step (e) prior to completion

of reading the data from the hard disk. Furthermore, the above references do not include, in any combination, the feature of the processor means compares measurements of adjacent sets of tracks of the hard disk to calibrate the data signals and adjust the data signals for skew angle deviation
